Correction: Gastric emphysema and pneumatosis intestinalis in two common marmosets with duodenal dilation syndrome

Shinpei Kawarai^{1,2†}, Yasuhiro Sakai^{3†}, Atsushi Iriki^{1,4} and Yumiko Yamazaki^{1,5*}

Correction: *BMC Vet Res*20, 223 (2024)

<https://doi.org/10.1186/s12917-024-04087-8>

Following publication of the original article [1], the authors would like to update Fig. 2 as they claimed to have used the wrong figure file. As a result, there is a duplication on Figs. 2e and 3a. The correct and incorrect Fig. 2 are given below.

[†]Shinpei Kawarai and Yasuhiro Sakai contributed equally to this report.

The online version of the original article can be found at <https://doi.org/10.1186/s12917-024-04087-8>.

The incorrect Figure:

Fig. 2 Gastric emphysema and pneumatosis intestinalis, marmoset, HE. **a, b** Stomach, case (1) **c** Stomach, case (2) **d** Duodenum, case 1. The gastric and duodenal mucosa contain numerous empty spaces, which are gas cysts. **e** Liver, case (1) Abnormal dilation of the portal vein suggests hepatic portal venous gas. **f** Liver, case (2) There are numerous rods, neutrophil infiltration, and liver cell necrosis around the main trunk of the portal vein

The correct Figure:

Fig. 2 Gastric emphysema and pneumatosis intestinalis, marmoset, HE. **a, b** Stomach, case (1) **c** Stomach, case (2) **d** Duodenum, case 1. The gastric and duodenal mucosa contain numerous empty spaces, which are gas cysts. **e** Liver, case (1) Abnormal dilation of the portal vein suggests hepatic portal venous gas. **f** Liver, case (2) There are numerous rods, neutrophil infiltration, and liver cell necrosis around the main trunk of the portal vein
